The piece is named after Newcastle's famous bridge across the River Tyne linking Newcastle and Gateshead, the first important rail crossing in Britain designed to carry more than two tracks. It was begun in 1846, opened in 1849 and replaced a bridge that had been built in 1781. The High Level, designed by Robert Stephenson, was based on a series of cast iron bowstring arches springing from tall stone piers; each of the six main spans stretched for 125 feet, the length of the whole being 1,372 feet, well over a quarter of a mile. It was a marvel of the age, and so splendid that Queen Victoria herself performed the opening ceremonies.
